

AFE BABALOLA UNIVERSITY MULTI- SYSTEM HOSPITAL, ADO-EKITI

The Perfect Healthcare Destination

Website: www.abuad.edu.ng

Foreword from the Founder's Desk

*“ABUAD
Multisystem Hospital
is a child of
circumstance like
Afe Babalola
University, Ado
Ekiti.”*

**AARE AFE BABALOLA, OFR, CON, SAN, FCI Arb, FNAILS, LL.D (Lond.) LL.D (Unilag), LL.D (Unijos), LL.d (UNAD), LL.D (FUTA), LL.D (Ayingba), LL.D (NDA)
Founder and President Emeritus.**

During the second coming of Chief Olusegun Obasanjo as a democratically elected President of the Federal Republic of Nigeria, I was invited to be Minister of Justice and Attorney General of the Federation. I politely declined the offer. I was then invited to head the Governing Council of University of Lagos (UNILAG) as the Pro-Chancellor because the University was polarized following the establishment of an outreach in South Korea where the University degrees were

on sale. I accepted the offer because I was the Chairman of Transparency International in Nigeria at that time. I saw with my naked eyes, the rot and decay in public Universities, I invited my clients including Julius Berger, Shell, Mobil, and Banks to assist the University. Within two years, the roads were tarred. Julius Berger put up a new building for Engineering and equipped it. I also put up an Auditorium. More importantly, I was able to bring stability into the University's calendar. We succeeded in stopping industrial strikes which was a common practice at that time. Because of the stability and development of the University, the Nigerian University Commission voted me as the Best Pro-Chancellor of Nigerian University twice. UNILAG was voted the Number 1 University in Nigeria. The Vice-Chancellor, Prof. Oyewusi Ibidapo-Obe, was voted as the Best Vice-Chancellor.

In 2007, I left the University of Lagos. I decided to set up a non-profit University and replicate what I did at the University of Lagos in the hope that the University would be run as an example of how a university should be run. Within three years, the National Universities Commission described my university as "a model, benchmark and reference point". Some years ago, the National Universities Commission described the University as "the pride of University system in Nigeria". To underscore the place, and import of our university, three former Presidents of Nigeria have visited the University and their verdicts were of excellence about ABUAD: Chief Olusegun Obasanjo described it as a "model to emulate", former Military Leader, Dr. (Gen) Yakubu Gowon (rtd) described the setting as "superlative and impressive with nothing of its kind that I have seen so far in this country or anywhere". Former President Goodluck Jonathan also described it as "notably one of the most outstanding individual contributions

towards government educational project" and recently described by the African Union – Economic, Social and Cultural Unit (AU-ECOSOCC) as "Pan African University".

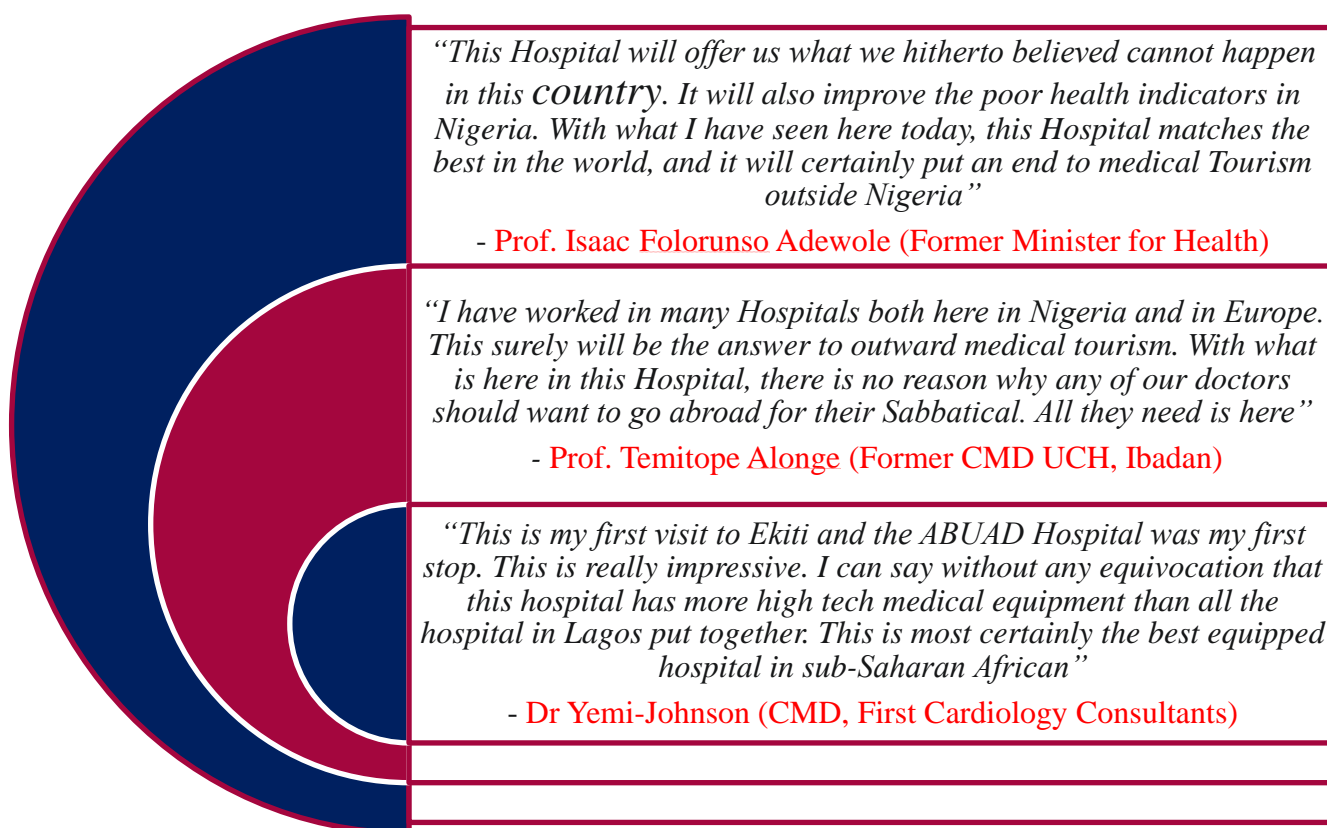

The University operates a Collegiate System with eight Colleges: College of Medicine & Health Sciences, College of Law, College of Engineering, College of Social & Management Science, College of Agriculture, College of Arts & Humanities and College of Postgraduate Studies.

To complement its Medical Training Program that will be void of incessant strike actions by the Doctors, I built an ultramodern 400-bed Multisystem, the best of its type around, which was commissioned at an elaborate ceremony on October 20, 2017, and commenced full operations on March 21, 2018.

In its avowed determination to ensure that the Multi-system Hospital stands out as a clear leader and the toast of its peers in Africa, it was populated with the most modern and sophisticated medical equipment. We hired the best human resources that will make it the Hospital of first choice in Africa.

To realize its dream of quality Medical Education, research and superlative healthcare delivery, ABUAD Multi-system Hospital has been in partnership with reputable global players in the healthcare industry including, JNCI Limited and General Electric that supplied the medical equipment, Apollo Hospital, and First Cardiology Consultants that partnered the hospital on Cardiovascular Mission, Insta-Focus Company that provided the Electronic Medical Records (EMR) and Hospital Management Information System (HIMS), Afriglobal Limited, Protech Gas Limited and Manipal Hospital in India as well as Project C.U.R.E of the United States of America among many others.

The place of the Multi-system Hospital has been corroborated by top rate Medical Educators.

In appreciation of the world-class medical equipment and first-rate medical and allied professionals that populate the Multi-system Hospital, everyone that has visited the Multi-system Hospital has a new name for it.

AMSH VISION AND MISSION

Afe Babalola University Multi-System Hospital was established purposely to offer the best healthcare service to the global community in an environment where academic and professional excellence and discipline are duly recognised and rewarded. The healthcare services are at a quaternary level, with a deep interest in research and training, aiming to reverse the trend of outward medical tourism.

Our Vision is to be the unmatched leader by improving quality and reducing the cost of healthcare for the patients in the communities we serve.

Our Mission is provides quality health services, inspire hope and contribute to health and wellbeing by providing the best care to every patient through integrated healthcare delivery, research, teaching and learning.

The Hospital commenced operations with a handful of activities domiciled within the Radiology and Emergency Units. Since then, the Hospital has witnessed tremendous organic growth and recorded several breakthrough procedures.

- Commissioned on 21st October 2017 and commenced full operations on 21st March 2018
- Populated with the most modern and sophisticated medical equipment

Front and side views of the Hospital

Several breakthrough procedures have been performed successfully. Notably, AMSH Cardiovascular Unit has performed over a hundred complex surgeries and interventional cardiac procedures as of September 2023.

Equally remarkable is the Renal Centre which now offers over 400 dialysis treatment sessions monthly and has offered fourteen (18) kidney transplants in its Renal Transplantation Program. Currently, the kidney transplant programme is run in partnership with Marengo Asia Healthcare Ltd, India.

The hospital has opened several specialty units manned by distinguished experts in their various fields including but not limited to:

- Fertility Centre
- General, Endoscopic and Laparoscopic Surgical Unit
- Plastic and Reconstructive Surgical Unit
- Neurosurgery and Spine Unit
- Orthopaedics and Joint Replacement Unit
- Urologic Surgical Unit
- Ophthalmologic Unit
- Ear/Nose/Throat and Endoscopic Unit
- Dental Surgery Services
- Internal Medicine (Cardiology, Nephrology, Endocrinology and Neurology)
- Obstetrics/Gynaecology/Laparoscopy and Assisted Reproduction Unit
- Paediatrics and Child Health (PACU, NICU and SCBU)
- Mental Health and Drug Rehabilitation Service Unit
- Clinical Pathology Unit (Multi-Disciplinary)
- Active Blood Transfusion Service

The hospital has emerged as a leading force in healthcare delivery across Nigeria, and the entire globe with referrals from all over the country and as far as North America. The hospital also leads with the provision of top-notch medical education to trainee medical personnel in various fields as well as innovation through research. Indeed, it has begun to live up to its creed as the PERFECT HEALTHCARE DESTINATION.

HIGHLIGHT OF ACHIEVEMENTS

AMSH AS A CENTRE OF EXCELLENCE IN CARDIAC SERVICES:

A wide range of cutting-edge open-heart surgeries and cardiac interventional procedures have been completed successfully, including multiple valve replacements, coronary artery bypass grafts, pacemaker insertions, and the repair of complex heart congenital disabilities. On record, the Cardiac Unit has performed over a hundred procedures within five years of its establishment with an excellent success rate. These contributions to cardiac health have dramatically improved outcomes in the area of cardiac health and treatment.

Cardiac Catheterisation Laboratory, with the insert showing the cardiac team performing a procedure

In April 2021, the Hospital successfully carried out an endovascular stent placement to repair an abdominal aortic aneurysm. That was the first time such a procedure would be done in Nigeria. Little wonder, then, that the Nigerian Cardiac Society, at its golden jubilee celebration in September 2021, delightfully honoured the Hospital with the Distinguished Service Award for our numerous contributions to cardiovascular health and services. In addition, in December 2021, VOOM Foundation, a US-based team of Surgeons and Clinicians in partnership with the Multi-System Hospital and Healthy Heart Foundation, HHF, provided free open-heart surgery to patients at the ABUAD Multi-System Hospital.

*Open heart surgery being performed in the dedicated cardiac theatre.
Picture also shows the heart-lung machine in the insert.*

CENTRE OF EXCELLENCE IN RENAL (KIDNEY) CARE:

The Hospital is also fast gaining its place as the leading centre for kidney health with the recent inauguration of its state-of-the-art Dialysis Centre. The centre was established in conjunction with world-renowned safety experts in kidney health and staffed by numerous expatriates and local experts in the field. Sixteen modern dialysis machines have been installed in the first phase with impeccable standards to ensure absolute safety for the procedures. Starting with an average of 10 dialysis treatments every month about five years ago, the Renal Unit now performs over 400 dialysis treatment sessions monthly.

The Dialysis Treatment Station at the Renal Centre

In the second week of October 2021, the hospital Renal Transplant team, comprising nationals and expatriates, carried out its first renal transplant. Since then, the patient has not had any dialysis sessions, and he and his donor have

been fairing well. Thereafter, seventeen other patients underwent renal transplantation successfully. It is particularly noteworthy that six of them had their kidney transplant procedures in the second week of September 2023. We are proud to announce the expansion of our kidney transplant program through a new partnership with Marengo Asia Healthcare Private Limited, a leading healthcare provider in India. This partnership has already yielded significant success by completing four successful kidney transplants in the first visit in November 2024. These surgeries represent a monumental step forward, allowing us to offer life-saving care and specialized treatment without the need for patients to seek care abroad.

Through this collaboration, we are also set to expand our service offerings.

Together with Marengo Hospital, AMSH will soon provide:

1. Endourology Services: Introducing minimally invasive options for managing complex urological conditions.
2. Penile Implants for Erectile Dysfunction: Offering new solutions to improve quality of life.
3. Laparoscopic and Advanced Surgical Procedures: Providing cutting-edge, minimally invasive surgeries for a wide range of conditions.

These additions strengthen AMSH's role as a leading healthcare provider in the region, bringing advanced medical care and expertise closer to the people of Nigeria.

ARRAYS OF IMAGING EQUIPMENT

- 2 units of 1.5T MRI machines – a signal explorer and a signal creator

- 2 units of CT Scan – 160 slides and 64 slides

ABUAD MULTI-SYSTEM HOSPITAL, ADO-EKITI

- Bone densitometer
- Digital mammography

- Digital Fluoroscopy

Others: Digital radiography (fixed and mobile X-rays) and Ultrasound Machines

MULTI-SYSTEM IN-PATIENT CARE AND APPROACH:

True to its name, the Hospital has also led in multiple specialities providing cutting-edge medical and surgical services available only in the best hospitals around the globe. These services include:

Modular Theatres

There are six modular theatres available for the use of the various surgical units for the provision of the following services:

- Brain surgeries and repair of congenital and vascular malformation
- Spine surgeries, including correction of deformities
- Total joint replacement surgeries, including revisions
- Adult reconstruction surgeries including correction of limb deformities, limb lengthening
- Surgical oncology with attention to breast, intestinal, liver and pancreatic cancers
- Robust urological surgical services

- Plastic surgeries, including cosmetic and restorative surgical procedures
- Eye surgeries with the restoration of vision
- Ear/Nose/Throat Surgical procedures
- Obstetrical, gynaecological and assisted reproduction procedures
- Full range of dental procedures including major surgical and restorative interventions

A typical suite in the modular theatre

A surgical procedure being performed in one of the theatre suites

In addition, two theatre suites are available within the accident and emergency unit for emergency and minor cases and another two suites for obstetric patients.

Endoscopy Services

The Hospital has facilities for

- Both upper and lower GIT endoscopy
- Endoscopic and laparoscopic surgeries, including ERCPs, stent placement
- Endoscopic ear, nose and throat surgeries, including hearing implants with the restoration of hearing
- Endourological procedures

An upper GIT endoscopy and biopsy carried out on a patient being investigated for gastric cancer

Accident and Emergency Unit

The 24-bed accident and emergency unit also houses a mobile x-ray machine, a dialysis machine for acute haemodialysis, ultrasound machines, two theatre suites and a two-bed high dependency unit.

The Hospital provides a wide range of out-patient and in-patient medical services in various specialities like Cardiology, Endocrinology, and Nephrology. Others are Haematology, Oncology, Neurology, and Paediatrics. These services are offered by a wide range of excellently trained Consultants, Nurses and other supporting staff.

Intensive Care Unit

There are a total of 16 beds in the Hospital for intensive care. Each bed has its own ventilator, multi-parameter monitor, infusion pump, oxygen and vacuum supply. Also provided within the unit are ECG and USS machines, mobile X-ray machine and dialysis machine for acute dialysis. Thus, surgical care for cancers requiring intensive post-operative care has been made possible with the intensive unit.

Power Generation

The Hospital runs on an independent power generation plant that generates 2.5MW of energy. This is supported by diesel-powered generators and UPS, thus providing 24-hour electricity in the Hospital.

Wards

With a total of 400 beds distributed across various specialties, those requiring in-patient care can easily be managed. Each bed has a bed head unit that is connected to a central oxygen supply generated by the Hospital gas plant, central vacuum, call bed and other accessories.

Private wards are also available on request.

A private ward in the Hospital, with a mini-kitchen, convenience, in-room entertainment and a bed for a relative

A transit building provides accommodation for patients' relatives who choose to stay within the Hospital. Patients who have been discharged can also lodge there pending their next out-patient appointment

Pharmacy

The ABUAD Pharmacy (pictured above) provides a wide range of pharmaceutical services to our patients and the community.

Through the interrelationship among academic pharmacists, industrial pharmacists and the hospital pharmacy, ABUAD successfully produced and registered Nigeria's first scientifically researched and evaluated herbal preparation, ABUAD Herbal Virucidine Liquid. The Herbal medication has got NAFDAC's nod and is listed for production and sale as an immune

booster and antioxidant. It has also passed the proof of clinical trial for use in the management of COVID-19 by the Nigerian Institute for Medical Research.

Laboratory Services

Robust blood bank services with the capability to provide blood components like fresh frozen plasma, platelets and concentrates.

Blood Bank

A functional anatomic department that offers facilities for cytology and histology, among others.

Anatomic Pathology and Forensic Medicine Building

Other supporting Services.

Helipad

In the absence of a functioning airport in Ekiti State, ABUAD has a helipad where air ambulances and other helicopters can land or take off, thus easing the burden of emergency medical care.

Medical Oxygen Plant

Our Hospital generates medical oxygen. This is piped to the theatre and all hospital beds for ease of administration of oxygen when needed.

Electronic Medical Records

We offer ICT-driven services with an effectively “paperless” system backed up by a hospital management system

Pneumatic Tube System for the transfer of blood samples and medications from 29 stations in the Hospital to the main laboratory and pharmacy, all within 2 mins

AMSH MOLECULAR LABORATORY:

The ABUAD Multi-System Hospital Molecular Laboratory equipped with three Polymerase Chain Reaction (RT-PCR) machines (a 96-well machine inclusive) has been instrumental in diagnosing and managing COVID-19 infections. Following the success at the Accreditation Visit by the Medical Laboratory Council of Nigeria and the optimisation visit by the National Centre for Disease Control, our molecular laboratory was activated as a COVID fee-paying private

testing lab in Ekiti state in November 2021. The laboratory now provides both outbound and inbound travellers testing in addition to other viral studies.

MEDICAL EDUCATION:

The Multi-System Hospital, while providing medical services as detailed above, is also engaged in research and training of both undergraduate medical and allied students. It is no gainsaying that the University's Medical School, which started about eleven years ago, has graduated five sets of medical students. Those students with access to the state-of-the-art facilities in the Multi-System Hospital are undoubtedly part of the best-trained medical students in Nigeria. To enhance the training of the medical and paramedical students, a purpose-built Clinical Skill Laboratory, which has been described as the best in the country, was commissioned in December 2021.

POST-GRADUATE MEDICAL TRAINING:

In October 2021, the Hospital received the Accreditation Team of the National Postgraduate Medical College for the accreditation of Residency training in Family Medicine. In its Report, the Panel commended the state-of-the-art facilities and infrastructure in the ABUAD Multi-System Hospital and observed as follows:

"The Hospital environment was generally quite clean and glamorous.

Basic infrastructure available in very reliable status.

Core and support departments well-staffed.

Core and support equipment in top form - Ten (10) modular theatres available with a functional cardiac Centre, 10-bedded ICU well-equipped (actually 16 in number when those in cardiac ICU and A & E are added); Model dental centre with six (6) dental chairs; Radiology Department with two (2) MRIs and two (2) Computerized Tomographic machines; mammography, fluoroscopy, bone densitometer, all offered; ultra-sound equipment in virtually all service areas; sixteen (16) dialysing Units and more - a Centre to applaud, indeed!

Well-structured training programme with ample opportunities for skill acquisition by Residents".

Furthermore, the College conveyed full accreditation for the Hospital to train Two (2) Senior Residents and Eight (8) Junior Residents in Family Medicine while looking forward to furthering fruitful collaboration between the College and ABUAD Multi-System Hospital in the promotion of postgraduate medical education in the country.

Subsequently, the Hospital has received full accreditation from the West African College of Physicians for the training of Residents in Family Medicine, and from the National Postgraduate Medical College of Nigeria and West African College of Surgeons for the training of Residents in Radiology.

The trainers have the unique privilege of working in an environment where their academic and clinical responsibilities are well harmonised, allowing the staff to actualise their full potential under the ABUAD /AMSH special relationship.

COST OF HEALTHCARE

Contrary to popular belief that the cost of accessing health care in the Multi-system Hospital is high, the Hospital offers the cheapest health care services given the array of services available, the highly qualified professionals involved in the care, and the modern facilities where healthcare is administered, among others.

HEALTHCARE ACCESS TO STUDENTS AND STAFF

ABUAD currently has a student population of about 9,500 at both the undergraduate and postgraduate levels. These students are from all 36 states in the federation, including the Federal Capital Territory and international students. They enjoy the unique advantage of access to health care from a world-class hospital right at their doorstep. The comfort, peace of mind and security available to the students, parents and staff alike is beyond measure. ABUAD, thus, stands out as the only University whose students receive primary health care services from a Hospital of the Multi-System Hospital standard.

Likewise, the staff of ABUAD enjoy the rare grace of being managed in our facilities at a significantly discounted price.

GOOD WELFARE PACKAGE TO STAFF:

The Hospital provides a very good working environment for its staff going by the welfare package and incentives available to the staff. To cushion the effect of the economic challenge and reduce the brain drain associated with the JAPA syndrome, the salaries and emoluments of our staff were increased by 35%, over and above what is obtained in public universities. In addition, members of staff enjoyed a 40% discount on tuition fees at the University and up to 30% discount on healthcare access in the hospital.

Accommodations are available within the hospital for the medical students and staff.

FREE MEDICAL SERVICES

Since its inception, the ABUAD Multi-system hospital has been offering free medical services. Such services covering medical and surgical services were offered to all and sundry in the first few months of our operation in 2018.

Subsequently, periodic free medical services and community outreaches have been organised. For example, in 2021, all patients seeking antenatal care in the Hospital from January to June were enrolled at no cost from registration to delivery. In addition, indigent patients who otherwise could not access medical care are managed on the Founder's account from time to time. As of the time of publishing this scorecard, the registration, consultation, and immunization for children under 5 years of age are free. Antenatal registration and consultation are also available free of charge.

To make these services more readily accessible to people, two outreach posts serving as annexes for the hospital have been established within the Ado-Ekiti metropolis. These are located in Basiri and Odo-Ado districts.

Introducing the Afe Abiye Program:

In addition to these advances, on October 18, a date now celebrated as Afe Babalola Day, our Founder and Chancellor, Aare Afe Babalola, introduced the Afe Abiye Program. This initiative offers free antenatal registration, consultations, laboratory investigations, obstetric scans, and vaginal deliveries for pregnant women. Since its launch, 47 women have enrolled, and we have supported six successful deliveries.

Moreover, AMSH continues to offer free consultation, registration, and immunization for children under five. These programs highlight our deep commitment to supporting maternal and child health and ensuring accessible healthcare for all.

Ambulance System and Emergency Medical Services Program:

Another significant support system established by our Founder is the ambulance and emergency medical services program. Through this initiative, AMSH provides a fleet of ambulances that members of the public can call to dispatch for home-to-hospital transport at no cost. This service has been operational for some time and can be accessed by calling +234 707 997 0509 or +234 707 280 9941. It is a vital link between our hospital and the community, ensuring timely medical assistance whenever it's needed.

AFE BABALOLA UNIVERSITY IN PERSPECTIVE

The University Gate

The University commenced operation in 2010. In its 12 years of existence, it has taken its deserved place as the pride of University education in Nigeria.

To underscore the place and import of the University, three former Presidents of Nigeria have visited the University: Chief Olusegun Obasanjo described it as a “model to emulate”, and former Military Leader, Dr. (Gen) Yakubu Gowon (rtd) described the setting as “superlative and impressive with nothing of its kind that I have seen so far in this country or anywhere”. The former President Goodluck Jonathan also described it as “notably one of the most outstanding individual contributions towards government educational project”. African Union –

Economic, Social and Cultural Unit (AU-ECOSOCC) recently described the University as “Pan African University”.

The University operates a Collegiate System with eight Colleges: College of Medicine & Health Sciences, College of Law, College of Engineering, College of Social & Management Science, College of Sciences, College of Pharmacy and College of Postgraduate Studies.

College of Law

The College of Law has been described as the best College of Law in Nigeria.

The College of Sciences Building

Hostel accommodations are available for over 8,000 students of the University. Recreational facilities, including cafeterias, are situated close to the hostels.

The Parent Teachers Consultative Building

BEST UNIVERSITY IN NIGERIA

National Universities Commission (NUC) was so impressed that it described the university as a “miracle, model, reference point and benchmark” for other Universities.

Times Higher Education World Impact Rankings 2022 and 2023

1st of the 197 Universities
in Nigeria

321st in the World (2022)
221st in the World (2023)

ABUAD INDUSTRIAL PARK

Recently, ABUAD commissioned a 50 billion naira industrial park. The construction of the first phase of the park, housing varying industrial estates, is almost near completion.

Upon take off, the Industrial Research Park will provide a functional and self-sustaining link between the University and Industry, launch Nigeria and other emerging economies in Africa into the modern age through innovative and research-driven industrialisation and entrepreneurship, promote investments in high-tech industries and encourage the establishment of Small, Medium and Large Scale Industries ranging from Manufacturing, Oil & Gas, Plastic, Blocks and Building, Woods, Electrical and Iron, Automobile, Food Processing, hair products and recycling of plastic products as well as refining of crude oil, among other several value-adding others totalling over 120 industries.
